

## Booking Form

# Inaugural Lecture on Dexter Meat Analysis

### Dr Sarah Morgan

Doctor Sarah Morgan performed this biochemical research under the direction of Professor Michael Lee, one of the acknowledged global leaders in grass only fed ruminant research, based at the world's oldest and largest research farm at Rothampstead, Okehampton, Devon. We are privileged that Dr. Morgan will give the lecture herself. She is a Welsh farmer's daughter.

This inaugural lecture will at last unlock the secrets of Dexter meat that will justify the long held belief by breeders and consumers alike that Dexter meat has a unique and distinctive flavour. Not only that but you will discover that this grass only fed meat has vital minerals, vitamins and fats essential in a balanced human diet. Furthermore it is a sustainable product that has an important role in global food security.

**Sunday 11<sup>th</sup> July 2021**
